

NAGARAJ

Full-Stack Developer | AI-Driven Web Applications | React · TypeScript · Python

[Yadgir, Karnataka](#) · [+91 6362835904](#) · nagupoojary33@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Versatile Full-Stack Developer and AI practitioner with a BCA degree (CGPA: 8.26) and proven experience architecting responsive, component-based web applications and deploying AI-driven software systems. Proficient across the full stack — React, TypeScript, and Tailwind CSS on the frontend; Node.js, Express.js, MongoDB, and REST APIs on the backend; and Python with CNN/MobileNetV2 for deep learning applications. Demonstrated ability to engineer production-quality features, eliminate performance bottlenecks, and deliver clean, maintainable code across web and AI domains. Eager to bring cross-functional technical depth, strong analytical thinking, and a builder's mindset to a high-impact engineering team.

SKILLS MATRIX

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

AI / ML: CNN, MobileNetV2, OpenCV, NumPy, Matplotlib, Streamlit

Tools: Git, GitHub, VS Code, Postman, Webpack, Babel, Docker/CI-CD concepts

Backend & DB: Node.js, Express.js, MongoDB (MERN Stack), Python, SQL, REST APIs

Styling: Sass/SCSS, CSS Modules, Bootstrap, Responsive Design, Flexbox/Grid

Architecture: Component-based design, Stateful/Stateless patterns, MVC, Async JS

PROFESSIONAL EXPERIENCE

Saiket Systems · Frontend Development Intern

Sep 2025 – Oct 2025

- Architected and delivered 10+ responsive UI components using React, TypeScript, HTML5, and CSS3 — improving visual consistency and interactivity across the application and accelerating feature delivery by 40%.
- Engineered a component-based architecture with clean separation of stateful (container) and stateless (presentational) components, reducing code duplication by ~30% across multiple views.
- Integrated UI components with RESTful APIs using React Hooks (useEffect, useState), handling async data flows, loading states, and error boundaries for seamless user experiences.
- Optimized Webpack/Babel build pipelines in collaboration with senior developers, identifying and resolving performance bottlenecks that improved component render times.
- Participated in agile development cycles — sprint planning, code reviews, and iterative delivery — gaining practical exposure to professional software release workflows and CI/CD concepts.

SELECTED PROJECTS

Pothole Detection System — AI-Driven Web Application — [Python](#) · [CNN](#) · [MobileNetV2](#) · [OpenCV](#) · [Streamlit](#)

Dec 2024 – Apr 2025

- Architected and led the end-to-end development of an AI-based road analysis system using CNN with MobileNetV2, delivering confidence-based real-time pothole predictions on live webcam feeds.
- Engineered a Streamlit web application integrating OpenCV and Matplotlib for visual overlays and image processing — deployed to a cloud-accessible platform with audio alert functionality.
- Managed the full software development lifecycle: requirement gathering, model architecture design, integration, debugging, testing, and deployment — demonstrating complete project ownership.

Task Manager — Full-Stack Web Application — [React](#) · [TypeScript](#) · [Node.js](#) · [MongoDB](#) · [REST API](#)

Aug 2025 – Sep 2025

- Engineered a full-stack CRUD application with a React/TypeScript frontend and Node.js/Express backend, implementing strongly-typed component interfaces and REST API endpoints connected to MongoDB.
- Architected reusable UI components styled with Tailwind CSS utility classes, managing async state with React Hooks and handling loading, error, and success states cleanly across all operations.
- Implemented mobile-first responsive design ensuring consistent cross-device and cross-browser compatibility throughout the application.

ThinkFast Quiz — Interactive Single-Page Application — [React](#) · [TypeScript](#) · [Tailwind CSS](#) · [JavaScript](#)

Jun 2025 – Jul 2025

- Engineered a feature-rich SPA with real-time countdown timer, animated progress tracking, and sound alerts — achieving zero external framework dependencies through optimized vanilla JS logic.
- Architected using React Hooks (useState, useEffect, useRef) and Object-Oriented patterns, cleanly separating game state logic from UI rendering for full maintainability and testability.
- Resolved complex cross-browser compatibility issues through systematic debugging, delivering a consistent, high-performance user experience across all major browsers.

ADDITIONAL PROJECTS

- Mood-Based Travel Explorer (SPA) — Engineered a dynamic single-page travel recommender with stateful DOM manipulation, playlist integration, and seamless multi-feature UX in vanilla JavaScript.
- Weather Forecast App — Built a real-time weather dashboard consuming the OpenWeather REST API, implementing TypeScript-typed responses, async error handling, and responsive Tailwind CSS layouts.
- Portfolio Websites — Designed and shipped 3+ personal portfolio sites with fully responsive HTML5/CSS3/Bootstrap layouts, optimised for performance across all screen sizes and devices.

EDUCATION

Bachelor of Computer Applications (BCA)

Sep 2022 – Jun 2025

GFGC, Yadgir · CGPA: 8.66 · Specialised in software development, frontend technologies, and applied deep learning.

PUC – Science

Aug 2020 – Apr 2022 · 60%

SSBD PU College, Shahpur, Yadgir

CERTIFICATIONS

- Frontend Development — [Simplilearn & Skillup](#)
- Python Programming — [Skill India Digital Hub \(Microsoft Collaboration\)](#)
